Crustdata × Y Combinator | Co-hosted with IIT BOMBAY Techfest Asia's Largest Science & Technology Festival

CONTEXTCON 03

The Agentic Services Hackathon

Services as software, powered by agent-native data infrastructure.

Claim your 15,000 credits

Sign up with your IIT Bombay email before building begins at 10:30 AM.

CONTEXTCON-IITB

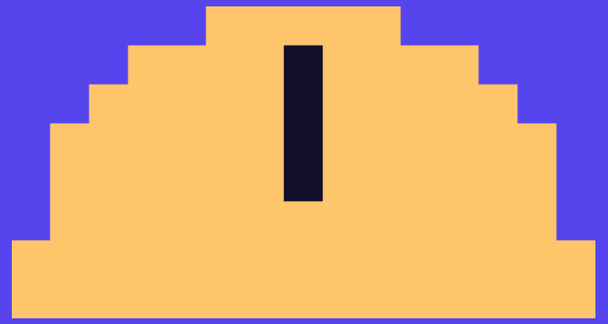

1. Go to app.crustdata.com and type your IIT Bombay email, ending @iitb.ac.in.
2. Click “Have a promo code?”, enter the code, then Continue.
3. Open the sign-up link in your IIT Bombay inbox. Your dashboard opens, with your credits and API key.

APP.CRUSTDATA.COM

The day

9:00 AM	Doors open: check-in
9:30 AM	Kickoff, by Techfest, IIT Bombay
9:45 AM	Opening remarks and the theme, from Crustdata
10:00 AM	The hackathon: how the day runs, submitting and judging
10:10 AM	The Crustdata API session
10:15 AM	Team formation and setup
10:30 AM	Building begins
12:30 PM	Tech talk: Keeping the world's business data fresh
1:30 PM	Lunch, at your desk
3:00 PM	Last call: thirty minutes to code freeze
3:30 PM	Code freeze: repos and Loom videos due, then tea and snacks
3:45 PM	Activities in the Lecture Hall, while the judges review
5:00 PM	The ten finalists announced
5:15 PM	Finals, live on stage
6:25 PM	People's Choice vote
6:30 PM	Winners announced, and the felicitation
6:45 PM	Closing ceremony and party

Welcome to ContextCon 03.

The Agentic Services Hackathon, co-hosted by Crustdata and Techfest, IIT Bombay, in partnership with Y Combinator.

Can We Fix It?
Bob the Builder

The canonical identity graph for people and company data

YC F24

Backed by Y Combinator, General Catalyst and SV Angel.

$12M ARR

Building toward the next milestone of $100M.

Agent-native

One live record per person and company, through an API and an MCP server.

Y Combinator

The accelerator behind Airbnb, Stripe, Coinbase and DoorDash, and Crustdata's first investor.

Y Combinator

- **The platform**
  Every builder here registered through Y Combinator's events platform.
- **The prize**
  1-on-1 office hours with Jon Xu for the top three teams.
- **Crustdata is YC F24**
  Part of Y Combinator's Fall 2024 batch.

Jon Xu
Partner, Y Combinator

ContextCon so far

From India’s first YC hackathon to the first on an IIT campus.

19 April 2026
Bengaluru

ContextCon

India’s first-ever YC hackathon, the day after YC Startup School India.

2 October 2026
IIIT Hyderabad

ContextCon Deccan CTF

A 12-hour capture-the-flag with Y Combinator, for 600+ hackers.

24 October 2026
Bengaluru

ContextCon Build

The Agentic Services Hackathon, with builders hand-picked from across India.

31 October 2026
IIT Bombay

ContextCon 03

The first YC hackathon on an IIT campus, with Techfest. Today.

Crustdata × Y Combinator

ContextCon, 19 April 2026, Bengaluru

India’s first-ever YC hackathon.

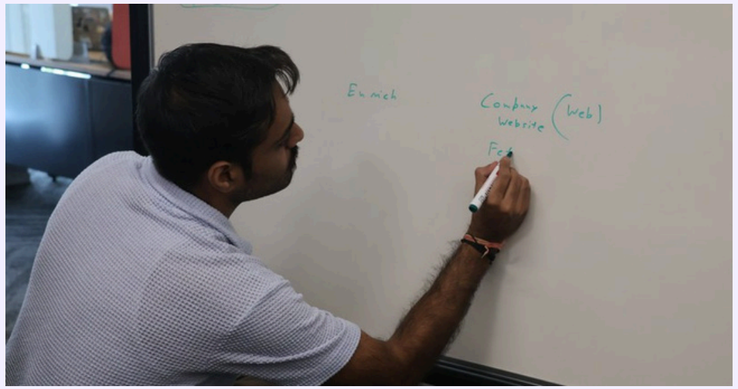

Hosted with Y Combinator, the day after YC Startup School India.

Where it all began

Six hours of building agents on Crustdata, with builders, founders and students from across India.

One day in numbers

1,100+
applications

108
builders in the room

76
products submitted

$12,000
in prizes, in Crustdata credits

1:1 office hours with YC

The top three teams won one-on-one office hours with Jon Xu, Partner at Y Combinator.

Jon Xu, Partner, Y Combinator

April’s winners, on stage at ContextCon

ContextCon Deccan CTF

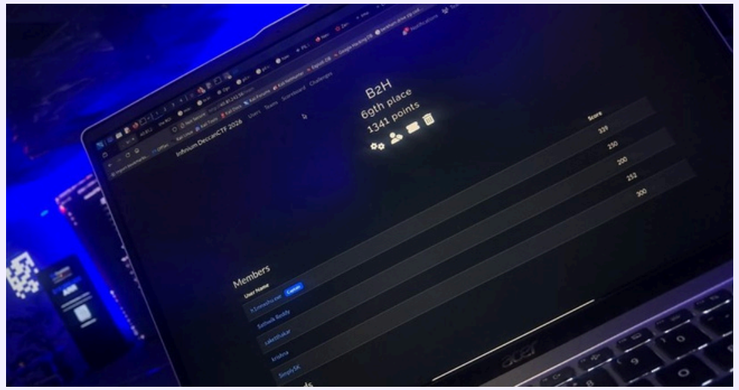

A capture-the-flag contest with Y Combinator: reverse engineering, OSINT and forensics.

600+

hackers, solving live

12

hours of reverse engineering, OSINT and forensics

ContextCon Build

The Agentic Services Hackathon: services as software, built in six hours.

- **The theme**
  Services, Replaced: agents that do a whole service job, not a tool for one step of it.

- **The builders**
  Hand-picked from across India: working engineers, founders and researchers.

- **The finals**
  The top six demoed live to the judges and the room.

31 October 2026, IIT Bombay

The first YC hackathon on an IIT campus.

ContextCon 03: Crustdata and Techfest, IIT Bombay, in partnership with Y Combinator.

Welcome from Crustdata

Manmohit

Co-founder

Crustdata (YC F24)

The Crustdata team

On the floor until code freeze. Ask us about the API, your credits and your build.

Services, Replaced.

Services as software, powered by agent-native data infrastructure.

Harder, Better, Faster, Stronger
Daft Punk

Services are at a turning point

For twenty years, software helped recruiters, analysts and diligence firms do their jobs. Now it does the jobs itself.

Companies spend far more on services than on software. Recruiting firms, auditors, insurance brokers and freight forwarders are paid for an outcome, not a tool, and agents can now deliver it. The latest models finish a full day’s work on their own, act through email, calls and payments, and look up who someone is and what a company does in one canonical graph.

Pick a job people are paid to do today, from hiring to underwriting to freight, and build the agents that do all of it. Bring in a person only for the exceptions, make every decision cite its reasons, and do it in five hours.

Why services, and why now

Four shifts in the last two years make whole services buildable for the first time.

Models do the work

They read a 300-page filing, call tools for hours and hold a plan across hundreds of steps.

The data is open to agents

Who someone is and what a company does, queried live, one record per person and company.

Agents act

They send email, book meetings, work inside other tools and move money, within rules a person sets.

The budget is already there

Software that delivers the outcome competes for the services budget, not the software budget.

A service is not a tool

What a service delivers, and where a tool stops.

THE SERVICE	THE TOOL
Parts delivered	Suppliers listed
Invoices paid	Invoices read
Fraud caught	Fraud flagged
Offers signed	Candidates sourced

What you will build

Agents that turn a whole service into software. For example:

The recruiter

Takes a role and returns an accepted offer.

The procurement desk

Turns a vague purchase request into a supplier an auditor would sign off on.

The underwriter

Checks every submission against the world, then quotes, refers or declines.

The scout

Finds exceptional founders before they raise, and says why each deserves a meeting.

The fraud investigator

Takes an insider tip and returns a complaint-ready case file.

The infrastructure

Memory that lasts for months, a check on every action, agents that pay their own way.

Ten themes, or your own idea

A single agent, a system of agents, an MCP server or a CLI: the shape is yours.

- Hiring
- Investing
- Research and markets
- Insurance
- Trust and compliance
- Buying and paying
- Agents that spend
- Supply chain
- Revenue
- Infrastructure for agents

Sample requests

One per theme. Take the closest to your product, or write your own in the same style.

Hiring

“We need a founding backend engineer in Mumbai who has shipped payments systems at a startup. Find five people worth a call this week, and tell me why each one fits.”

Investing

“Find ten Indian B2B software companies founded since 2023 whose team grew by half in the last six months, and tell me who founded each and what they did before.”

Research and markets

“Which Indian fintech companies are hiring the most engineers this quarter, and what does their hiring say about what each will launch next?”

Insurance

“A Pune logistics company applying for cover says it has 120 employees across three offices. Check that against public data and tell me what does not match.”

Trust and compliance

“Here is a new vendor’s name and website. Tell me whether it is a real, trading business: who runs it, how long it has existed, and anything that looks off.”

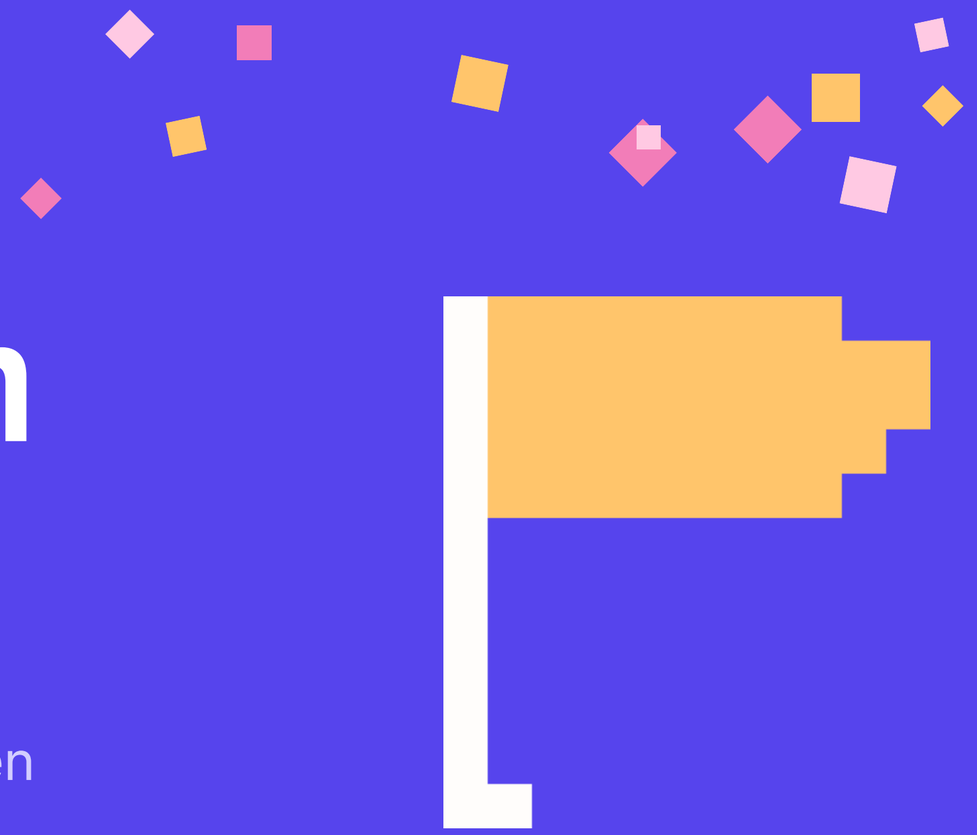

Sample requests

One per theme. Take the closest to your product, or write your own in the same style.

- **Buying and paying**
  “We need a payroll provider for 200 people in India. Give me three suppliers an auditor would sign off on, with the reasons for each.”
- **Agents that spend**
  “Sign our three-person team up for the tools a two-week data project needs, keep it under ₹50,000 a month, and show me every rupee.”
- **Supply chain**
  “Find three contract manufacturers in Tamil Nadu that make injection-moulded plastic parts, check each is real and active, and draft the first email to each.”
- **Revenue**
  “Find Indian companies that started hiring a head of data in the last 30 days, name the person who decides at each, and draft the first message.”
- **Infrastructure for agents**
  “Here are this week’s call notes for our top 20 accounts. Remember them, and before Monday’s review tell me what changed at each account and what to do.”

How the hackathon runs

Five hours of building, a two-minute Loom video, ten finalists on stage.

How today works

10:30 AM TO 3:30 PM

Build

Agents that do a whole service job, from the request to the finished work.

BY 3:30 PM

Submit

One form per team: a public repo and a two-minute Loom video.

3:30 TO 5:00 PM

Judging

The judges review every submission and choose the ten finalists.

FROM 5:15 PM

Finals

A five-minute live demo, then two minutes of questions. Winners at 6:30 PM.

Rules

- **Code from 10:30 AM**
  Ideas, sketches, plans and accounts before then are fine. Commit as you go: your commit history starts on 31 October.
- **Use any tools**
  Any model, framework, open-source library or AI coding tool. Using Crustdata is optional.
- **Keep agents in the room**
  During the event, agents contact only your own team and the Crustdata and Techfest teams.
- **Keep notes**
  What you try and what fails. They make the strongest demos and the best answers in the finals.
- **Be respectful**
  Help one another. If anything makes you uncomfortable, tell the Techfest team.

Submitting

By 3:30 PM, on the submission form. One person submits for the whole team.

Project

Team name, a one-line description and your theme.

Repo

A public GitHub repo, so the judges can open it.

Loom video

Two minutes: your product taking a request it has never seen to finished work.

Every member

Name and email exactly as on the YC registration, IIT Bombay email, roll number, personal email and GitHub username.

To make a change before 3:30 PM, submit again with the same team name. The latest submission counts.

Your README

Where the judges start. Give it:

- **The service**
  Which service it takes on, who does that job today, and who pays for it.
- **What it does now**
  The parts of the job it handles end to end, and where it still needs a person.
- **What it could do next**
  What you would build with more time, and why now is not the time.
- **How to run it, and how it is built**
  The steps to run it; the agents, models, tools and data, and where it calls Crustdata.
- **The approaches you tried**
  What worked, what did not, and why you chose the one you built.

Your Loom video

Two minutes of your product taking a request it has never seen to finished work.

Show the whole job

Start with the request going in, end with the finished work coming out.

Show your sources

Where each fact came from.

Keep the intro short

One sentence, then the product at work.

Check it plays

Open the link in a private window before you submit.

How judging works

FROM 3:30 PM

Round one

The judges review every repo and Loom video, against the five criteria.

5:00 PM

Ten finalists

Announced on stage and in the WhatsApp group, with the running order.

FROM 5:15 PM

The finals

A five-minute live demo, then two minutes of questions.

6:30 PM

The winners

The judges' first, second and third, and the room's People's Choice.

How winners are picked

Five criteria, each scored from 1 to 5, out of 100 points.

- **End-to-end execution, 25 points**
  Does the product take a request it has never seen all the way to finished work, with a person stepping in only for the exceptions?
- **Facts and verification, 20 points**
  Is every fact correct, and does every decision show its reasons and sources?
- **Robustness and edge cases, 20 points**
  Does the product keep working on messy inputs, unusual cases and tools that fail?
- **Customer value and idea, 20 points**
  Would a business pay for this today, and is the approach new?
- **Demo and understanding, 15 points**
  Does the demo show the job clearly, and does the team understand the problem?

What we want to hear

Above all, how well you understand the problem. In your Loom video, your README and the finals:

The service

Who pays for it today, and why you picked it.

The approaches

The options you weighed, and why you chose yours.

What failed

What worked in those approaches, and what did not.

The hardest case

And how your product handles it.

The testing

How you know it works.

What comes next

What you would improve, and why now is not the time.

People’s Choice

The room’s own pick, separate from the judges’ places.

- **When**
  From 6:25 PM, after the last finalist, while the judges confirm the winners. Voting closes at 6:30 PM.
- **How**
  Scan the QR code on screen, type the team name and score it from 1 to 5 on the five criteria.
- **Who votes**
  Every builder, once, for any finalist except your own team. Only your first vote counts.
- **The result**
  Announced with the winners at 6:30 PM.

Prizes

In Crustdata credits, for the top three teams of the finals.

First place

$8,000

Second place

$3,000

Third place

$1,000

- **Top three teams**
  1-on-1 office hours with Jon Xu, Partner at Y Combinator.
- **Standout builders**
  A pre-placement interview at Crustdata, from any team.
- **Certificates**
  From Techfest: Excellence for the top three, Merit for finalists, Participation for every valid submission.

Who to contact

Find the right person on the floor, or ask in the WhatsApp group.

- **Credits, the API, the MCP server and tech support**
  Jai, or anyone from the Crustdata team on the floor.
- **Your build: design, data and agents**
  The Crustdata team, on the floor until code freeze.
- **Submissions and the form**
  Ask in the WhatsApp group.
- **Halls, food, Wi-Fi, access and certificates**
  Techfest: Aryan Tamboli (+91 97022 76874) and Satwik Patti (+91 78426 25477).
- **Anything urgent**
  Aryan or Satwik from Techfest, on the numbers above.

Good to know

Do we have to use Crustdata?

No. Every project is judged on the same five criteria, with or without it.

Can we build outside the themes?

Yes: any service people are paid to do, on data about people and companies.

How long do the credits last?

They are for building today, so spend them freely.

What does a 429 mean?

Too many requests: wait a few seconds and retry. /account/credits shows what is left.

Building with Crustdata

Your credits, the docs and the APIs, in five minutes.

Jai

Crustdata

Unlocking your credits

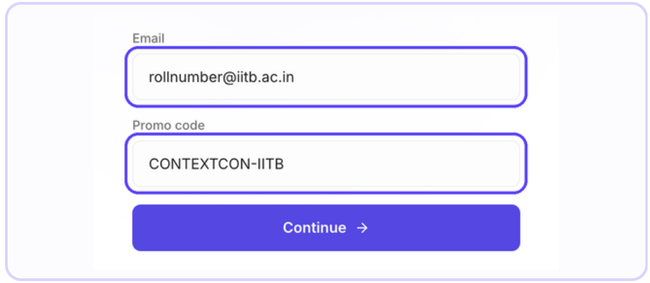

15,000 Crustdata credits per builder, on your IIT Bombay email. Do it before building begins at 10:30 AM.

your @iitb.ac.in email

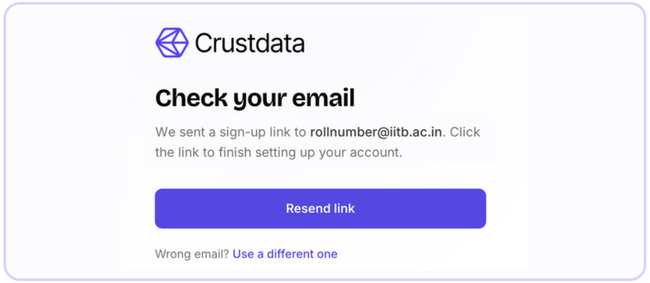

Promo code
CONTEXTCON-IITB

1 Sign up

Type your IIT Bombay email, click “Have a promo code?”, enter the code, then Continue.

2 Open the link

Crustdata emails a sign-up link to your IIT Bombay inbox. Open it to finish.

3 Your API key

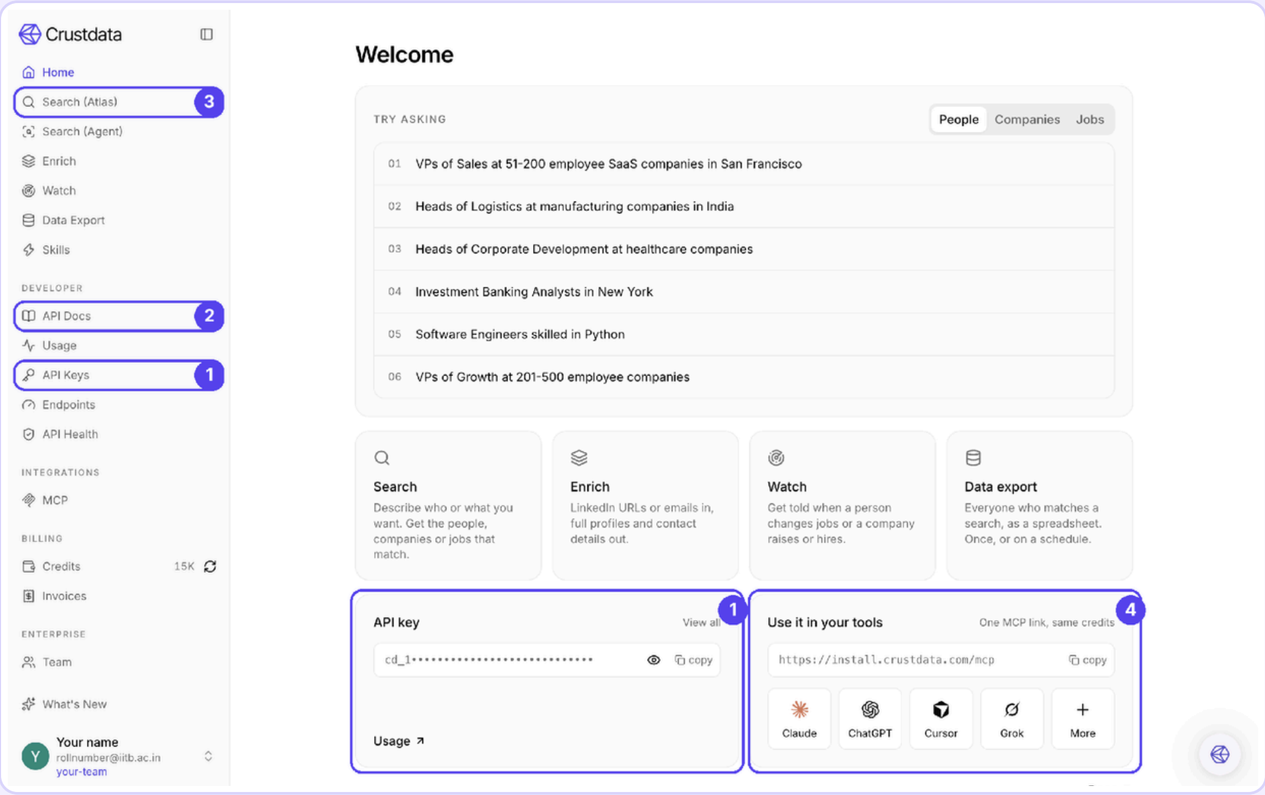

The dashboard opens with 15,000 credits. Copy your key from Home or API Keys.

Signed up without the code? Redeem it at app.crustdata.com/billing/credits

Where everything is

Your dashboard at app.crustdata.com, and the docs at docs.crustdata.com.

1 Your API key
API Keys, or the card on Home: show it, then copy.

2 The docs
Every endpoint, filter and field, with examples.

3 Search
Ask in plain English, or paste a cURL and run it.

4 The MCP server
One link for Claude, ChatGPT, Cursor and Grok.

The playground
Any API reference page: Try it, paste your key, Send.

Scan for the docs
`docs.crustdata.com`

The APIs

One canonical record per person and company, through eight endpoints and an MCP server.

Endpoint	What it returns	What you can build
Person Search	People by title, employer, skills, school and place.	Sourcing agents, prospecting, expert finders.
Person Enrich	A full career history, with education and skills.	Candidate screening, founder diligence.
Company Search	Companies by industry, size, growth and funding.	Deal sourcing, market maps, supplier discovery.
Company Identify	A name or a domain, resolved to one company.	Matching vendors, invoices and leads.
Company Enrich	Headcount over time, funding, leaders, web traffic.	Underwriting, credit limits, investment memos.
Job Search	Job postings by company, role and location.	Hiring signals, buying intent, competitors.
Web Search and Fetch	The web, news and papers, and any page’s text.	Research agents that cite every source.
Watcher	A webhook when a person, company or job changes.	Alerts on job moves, funding and new roles.
MCP server	Every endpoint above, for your agents.	Any agent: it picks the right call each step.

Connect your agents

Add the MCP server, or install the CLI. Both sign in through your browser.

The MCP server, in Claude Code or Codex:

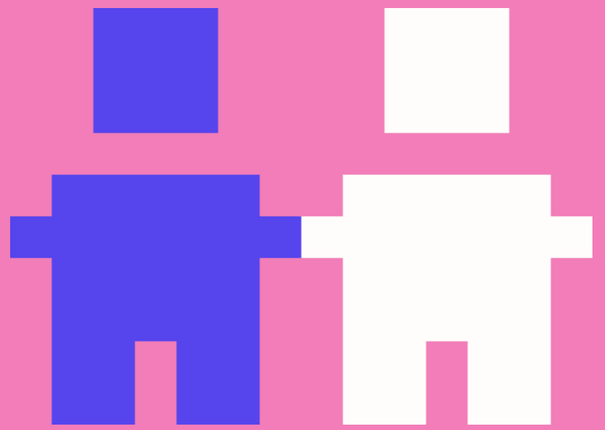

```
claude mcp add --transport http crustdata https://install.crustdata.com/mcp
codex mcp add crustdata --url https://install.crustdata.com/mcp
```

The CLI, on macOS or Linux:

```
curl -fsSL https://static-assets.crustdata.com/cli/install.sh | sh
crustdata auth login
crustdata company enrich --domains stripe.com --fields basic_info,headcount
```

API: api.crustdata.com, header x-api-version: 2025-11-01 Windows: docs.crustdata.com/for-agents/cli

Team formation and setup

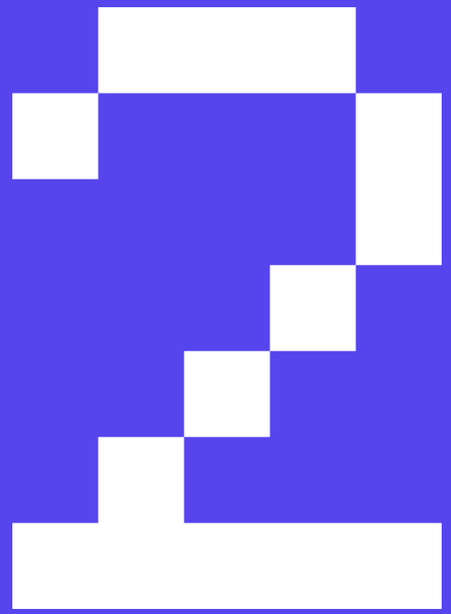

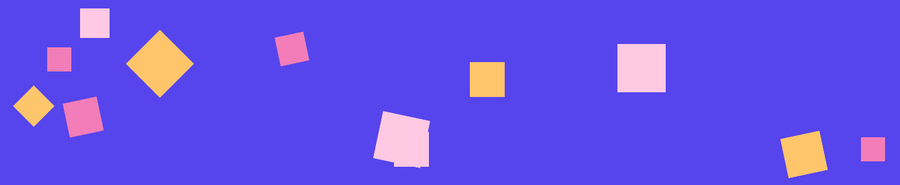

Building solo? Pitch your idea in one line, or join a team. Teams of up to four. Then claim your credits and set up your keys.

Building begins at 10:30 AM

Dil Chahta Hai
Shankar-Ehsaan-Loy

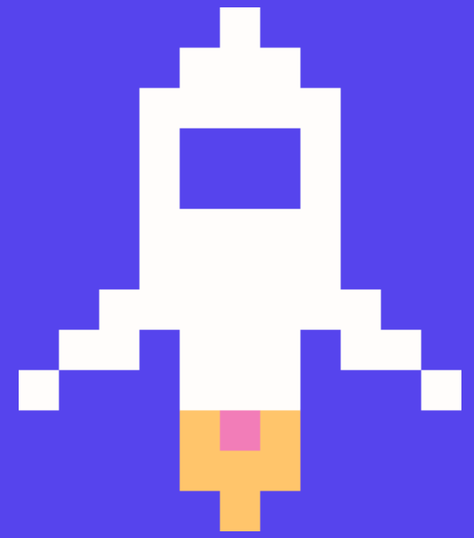

1

Building begins.

Five hours, starting now. The Crustdata team is on the floor until code freeze. Commit as you go.

Code freeze at 3:30 PM
